

A661

Vacuum type elemental analyzer

Application areas

Ore analysis, alloy detection, harmful element detection (RoHS, halogen), full element analysis, coating thickness measurement analysis. X-ray fluorescence spectrometer analysis has the advantages of simple sample preparation, fast analysis speed, wide analysis content range, good reproducibility, and high accuracy. With the continuous promotion of X-ray fluorescence spectrometry analysis technology, X-ray fluorescence spectrometer analyzer detection has been It has become the main means of quality control in many industries.

Instrument configuration

- ▶ High-resolution SDD silicon drift digital multi-channel electric cooling detector product repeatability test;
- ▶ High-efficiency ultra-thin window high-power X-ray tube;
- Signal to noise ratio enhancer;
- ▶ Signal detection electronic circuit;
- Computers and printers;
- ▶ Automatic switching collimator filters;
- ▶ High vacuum systems;
- ▶ High and low voltage power supplies;

Technical Parameters

- Elemental analysis range: sodium (Na) ~ uranium (U)
- Analysis element content range: PPM ~ 99.99% (different materials, different analysis ranges) any number of selectable analysis and identification models
- Independent matrix effect correction model
- Multivariable nonlinear regression procedures
- Ambient temperature: 15-30°C
- Simultaneous analysis of elements: dozens of elements can be analyzed simultaneously
- Test time:50-200s
- Power supply: AC 220V±5v, it is recommended to configure AC purified regulated power supply
- Energy resolution: 129±5eV
- Sample chamber size: 400*340*80mm
- Instrument size: 700*510*336mm
- Instrument weight: 56kg
- Analytical accuracy: 0.05% (high-quality products with a content higher than 96%, stability tested 21 times)

Performance advantages

- ◆ Down-illumination type: can meet the testing needs of samples of various shapes and states, and can conduct rapid non-destructive testing of solids, liquids and powders;
- ◆ High-resolution electronic refrigeration detector: good energy linearity, energy resolution and energy spectrum characteristics, the latest digital multi-channel technology, faster testing speed and higher testing accuracy;
- New generation of high-voltage power supply and X-ray tube: high-efficiency ultra-thin window X-ray tube, the index has reached the international advanced level, low-energy X-ray excites the sample to be tested, and has better excitation effect on light elements such as aluminum, silicon, and phosphorus;
- ◆ Intelligent vacuum system: shields the influence of air and greatly expands the instrument testing range;

| Sample repeatability test | | | | | | | |
|---------------------------------------|---------|---------|---------|---------|---------|---------|---------|
